

# Fairchild Cornells at No. 33 EFTS<sup>1</sup>

4 May 2023

## Introduction

The Fairchild Aircraft Company of Hagerstown, Maryland, produced three variants of its popular PT-26 trainer for the RCAF. The first variant, the Cornell Mk. I, was modified for Canadian conditions and included new features such as a closeable canopy and a cockpit heating system. The Cornell I was powered by a 200 hp, L-440-3 engine. Some 670 units were built for the RCAF.

Due, in part, to the official neutrality of the USA prior to the attack on Pearl Harbor, Fairchild Aircraft licensed the manufacturing of the PT-26 to the Fleet Aircraft Company of Fort Erie, ON. Some additional modifications were made to the original Mk I, including the upgrading of the engine to a 200 hp, 6-440-C5 engine. Fleet Aircraft built 807 PT-26A aircraft (also known as the Cornell Mark II or, more simply, the Cornell II) for the RCAF.

Later, Fleet Aircraft produced the PT-26B which was like the PT-26A, but with minor changes. Two hundred and fifty of these aircraft were manufactured for the RCAF and were known as the Cornell Mark III, or the Cornell III.

## Cornell Mk. I at No. 33 EFTS

Since these aircraft were manufactured in Hagerstown, Maryland, USA, and thus must conform to the strictures of American neutrality, they were assigned non-RCAF, non-RAF serial numbers and exported under the provisions of the Lend-Lease Act.
